

September 2020 – Technology Security Tip

Internet Security Awareness Course

With the huge shift to remote working over the last six months, many people find themselves in a vulnerable position when it comes to computer and mobile device security. We have moved away from the protection of the workplace firewall, virus protection and malware mail filters. It is more important than ever to be aware of the threats lurking behind one mouse click. Our security training company, Knowbe4, is now offering a free internet security course that you can take from home.

This course uses real-life examples to show the dangers of the internet and what you need to do to stay safe. Each section has a live demonstration showing how the "bad guys" take advantage of unsuspecting users and finishes up with a "security check" quiz at the end. To get started using the course, click on the link below:
