

## May 2022 – Technology Security Tips

### Multi-Factor Authentication

As you know, we are preparing to complete this year's application for our cyber-liability insurance coverage, which protects the Pastoral Center and all of the parishes and schools from some, or all, monetary loss from a cyber-attack. The easiest protection that we can all enable quickly is multi-factor authentication on our email, online banking, online shopping and social networking sites. Even if a password to an account is stolen, the criminal would not be able to access your account without a 3<sup>rd</sup> factor of authentication. You can read more [here](#) about how to enable this with the major accounts you may have. *Courtesy of PCMAG.com.*
