

July 2022 – Technology Security Tip

Changing Recommendations for Passwords

For years we have all been familiar with the standard recommendations for passwords. At least eight characters, a combination of upper and lowercase letters, numbers and special characters, password change every 90 days, etc. These recommendations are changing to keep up with the capabilities of criminals who use hacking and phishing to crack these “easy” passwords. Click [here](#) to read up on the industry’s current recommendations for passwords.
